

RHODES TOW LINE

WHY CONTINUE TO BATTLE WITH DOWN TIME AND HIGH MAINTENANCE COSTS ?

RHODES TOW LINE

The key to making the Rhodes Conveyor System so versatile is its ability to perform more than one function at a time. Additionally, the system has been engineered to run multiple drives on one precision calibrated, high tensile strength tow line chain.

Robust components, used on the Rhodes Tow Conveyor System, have been time tested to ensure that they adhere to the highest standards of quality, longevity and merchantability.

Currently there are over four hundred Rhodes Tow Conveyor Systems operating worldwide. Systems range from thirty (30) feet in length to over seventy-two hundred (7,200) feet in length.

Leave The Competition Behind With A New Rhodes Tow Line Conveyor

RHODES TOW LINE

RHODES TOW LINE

- Easy and quick installation
- Easily re-configured
- Extremely low maintenance
- Complete system access
- Variable speed
- Easy system expansion
- Infinite variable centers
- Economical, impressive return on investment
- Ethernet interfacing
- Factory automation compatible

FEATURES

- Mixed product capability
- Programmable cart delay
- Zero pressure accumulation
- Close pack
- On-floor or in-floor capability
- Point to point inline conveying
- Transfer spur for custom operations or bypass of unnecessary operations
- Cart-on-Call

INDUSTRIES SERVED

- Furniture manufacturing
- Progressive assembly
- Automatic painting and cleaning
- Warehousing
- Plastics finishing
- Custom millwork
- Robotic interface application
- High temperature application
- Automotive assembly
- Recreational vehicles
- OEM specialties
